

There is little if any evidence that the majority of health professionals, especially those working in primary health care, are any better informed than they were 10 years ago." The 10/90 gap, whereby less than 10% of health research is concerned with the conditions that account for 90% of global disease, may well be a 1/99 gap when it comes to health information: **BMJ Review 17 July 2004**

## **Session:** G2: Improved Health through Knowledge Networks

**When:** Friday, May 29, 2009 2:30 pm to 4:15 pm

**Where:** Diplomat Ballroom
